PROFESSIONAL SUMMARY

Java Full Stack Developer with 2+ years of experience delivering scalable web, mobile, desktop, and enterprise applications using Java, Spring Boot, React.js, Next.js, SQL Server, and REST APIs. Hands-on experience implementing Generative AI solutions with OpenAI, Azure OpenAI, LangChain, RAG, Prompt Engineering, AI Agents, and Vector Search. Skilled in secure application development, microservices, JWT authentication, performance tuning, and Agile delivery. Immediate Joiner.

SKILLS

Frontend: React.js, Next.js, JavaScript (ES6+), Redux Toolkit, HTML5, CSS3, Tailwind CSS

Backend: Java, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, RESTful APIs, Microservices, JWT Authentication

Generative AI: OpenAI, Azure OpenAI, LangChain, RAG, Prompt Engineering, AI Agents, Function Calling, Vector Search

Database: SQL Server, Vector Databases

Mobile: Flutter, Android, Firebase Cloud Messaging (FCM), Google Maps API

Tools & Platforms: GitHub, IntelliJ IDEA, VS Code, Postman, Swagger, Azure, CI/CD

Core Concepts: OOP, SOLID Principles, RBAC, Agile/Scrum, Performance Optimization

PROFESSIONAL EXPERIENCE

Software Engineer, Technvii

May 2024 – May 2026

Pune, Maharashtra

- Increased operational efficiency by approximately 30% and lowered page load time by approximately 35% across Java, Spring Boot, React.js, and SQL Server-based fleet management solutions.
- Architected secure REST APIs for trip lifecycle, vehicle operations, and driver management using JWT authentication and RBAC, supporting 10+ business modules with secure role-based access.
- Minimized UI development effort by ~25% by building reusable, responsive components with React.js, Next.js, HTML5, CSS3, and Tailwind CSS.
- Delivered an AI-powered diagnostic chatbot using OpenAI, Azure OpenAI, LangChain, Prompt Engineering, and RAG, improving diagnostic response accuracy.
- Built Flutter application features for trip management, breakdown reporting, vehicle inspection, FCM notifications, and Google Maps navigation, enhancing real-time driver operations.
- Partnered with cross-functional Agile/Scrum teams to troubleshoot defects, complete API integrations, and deliver production-ready features on schedule.

PROJECTS

Fleet Management System

Role: Full Stack Developer

Tech Stack: Java, Spring Boot, React.js, Hibernate, JPA, SQL Server, REST APIs, JWT Authentication, Google Maps API

Overview: Engineered a scalable Fleet Management System to manage drivers, vehicles, vehicle health, routes, and trips, focusing on operational efficiency and real-time data handling.

Key Contributions:

- Engineered Spring Boot services using Spring Data JPA and Hibernate for driver, vehicle, and trip lifecycle modules.
- Designed responsive React.js UI modules with role-based access control (RBAC) for secure multi-user access.
- Completed vehicle onboarding, telematics integration, health monitoring, and fuel management modules.
- Integrated Google Maps for live vehicle tracking, route visualization, and location-based dispatch.
- Launched a virtual vehicle dashboard for real-time telemetry and remote monitoring.

- Established vehicle inspection workflows to monitor vehicle health, manage service history, and track maintenance records for preventive maintenance.
- Refined SQL queries and database operations to accelerate data retrieval and application performance.

Impact & Achievements:

- Boosted operational efficiency by ~30% through streamlined trip planning and automated lifecycle management.
- Enabled scalable multi-organization support with a secure, role-based architecture.

Driver App

Role: Mobile App Developer (Flutter – Android)

Tech Stack: Flutter, Android, Firebase Cloud Messaging (FCM), Google Maps API, RESTful APIs, JWT Authentication

Overview: Developed a driver-side mobile application integrated with a Fleet Management System for trip management, real-time tracking, navigation, and driver operations.

Key Contributions:

- Configured secure authentication using OTP verification and JWT-based authorization.
- Defined trip management workflows for upcoming, live, and completed trips with real-time tracking.
- Applied Google Maps API for route visualization, navigation, and nearby search functionalities.
- Enabled real-time communication via SOS alerts and Firebase Cloud Messaging (FCM) for notifications.
- Added Proof of Delivery (POD) features with image upload, signature capture, voice-to-text, and location detection.
- Introduced an issue reporting feature so driver-reported issues appear in real time on the Fleet Management System web app.

Impact & Achievements:

- Strengthened cross-team project visibility and lowered manual coordination through real-time trip tracking and automation.
- Accelerated issue resolution by giving fleet operators direct, real-time visibility into driver-reported issues.

Diagnostic Tool

Role: Software Engineer

Tech Stack: Java, Spring Boot, REST APIs, SQL Server, OpenAI, Azure OpenAI, LangChain, RAG, Prompt Engineering, AI Agents, Function Calling, Vector Database, Manual Testing

Overview: Enhanced an existing automotive diagnostics desktop application by developing and integrating an AI-powered chatbot to assist technicians with vehicle diagnostics, fault analysis, troubleshooting, and technical guidance.

Key Contributions:

- Constructed an AI-powered chatbot using OpenAI, Azure OpenAI, LangChain, RAG, Prompt Engineering, AI Agents, Function Calling, and Vector Database.
- Connected the chatbot with existing Java backend services and REST APIs to deliver contextual diagnostic assistance and intelligent troubleshooting.
- Implemented RAG with vector search for accurate DTC retrieval, plus predictive suggestions for upcoming DTCs to help keep vehicles issue-free.
- Tuned prompts to improve chatbot response accuracy, context awareness, and overall user experience.
- Performed manual, functional, and regression testing, including bug verification and defect reporting, to ensure application quality.

Impact & Achievements:

- Reduced repetitive manual troubleshooting and improved technical support efficiency through AI-powered assistance.
- Improved diagnostic support by delivering contextual, document-based responses through Generative AI.

EDUCATION

Bachelor of Engineering (B.E.), Sinhgad College of Engineering

CGPA: 8.48/10 (76.52%) | Vadgaon, Pune

08/2019 – 06/2023

Higher Secondary Certificate (HSC), Hutatma Rajguru Mahavidyalaya

72.15% | Rajgurunagar, Pune

06/2018 – 03/2019

Secondary School Certificate (SSC), Nutan Vidyalaya Retwadi

80.00% | Retwadi, Pune

06/2016 – 03/2017
