Summary

Software Engineer with 2+ years of experience building scalable web, mobile, and full-stack applications using React.js, Next.js, JavaScript (ES6+), C#, ASP.NET Core, and SQL Server. Experienced in developing responsive user interfaces, backend APIs, and RESTful integrations. Strong focus on application performance, real-time data processing, and delivering production-ready solutions in Agile environments.

Skills

Frontend:

React.js, Next.js, JavaScript, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Responsive Design

Database:

SQL Server, SQL

Tools & Platforms:

GitHub, Visual Studio, VS Code, Postman, Swagger, ChatGPT, Claude

Backend:

C#, ASP.NET Core, RESTful APIs, Entity Framework Core, LINQ, JWT Authentication, OOP, SOLID Principles

Mobile (Android App Development):

Flutter, Android, Firebase Cloud Messaging (FCM), Google Maps API.

Other:

RBAC, Performance Optimization, Cross-browser Compatibility, Real-time Data Handling, Agile.

Professional Experience

Software Engineer, *Technvil*

Pune, Maharashtra | May 2024 – May 2026

- Developed scalable full-stack web applications using React.js, Next.js, C#, ASP.NET Core, and SQL Server for automotive and fleet management solutions.
- Designed and developed RESTful APIs for trip lifecycle management, vehicle operations, driver management, and role-based access control (RBAC).
- Built reusable and responsive UI components using React.js and Next.js, reducing development effort by 25%.
- Integrated frontend and backend systems through RESTful APIs for real-time data processing.
- Implemented secure authentication, authorization, form validation, and CAPTCHA integration.
- Developed Flutter mobile application features including trip management, vehicle inspections, breakdown reporting, push notifications, and Google Maps integration.
- Collaborated with cross-functional teams in Agile/Scrum environments to deliver production-ready software solutions.

Key Achievements:

- Reduced page load time by approximately 35% through frontend optimization, SSR improvements, and efficient data handling.
- Improved operational efficiency by approximately 30% through scalable trip lifecycle management and multi-tenant architecture.

Projects

Fleet Management System

Role: Full Stack Developer

Tech Stack: React.js, ASP.NET Core, C#, EF Core, LINQ, SQL Server, RESTful APIs, JWT Authentication

Overview:

Engineered a scalable Fleet Management System to manage drivers, vehicles, routes, and trips, focusing on operational efficiency and real-time data handling.

Key Contributions:

- Developed backend APIs using ASP.NET Core, Entity Framework Core (EF Core), and LINQ for trip lifecycle management, including creation, assignment, real-time tracking, and completion.
- Constructed frontend modules for driver, vehicle, and user management with secure role-based access control.
- Implemented vehicle onboarding, telematics device assignment, vehicle health monitoring, and fuel management modules.
- Built route management with dynamic location selection and stoppage handling for efficient fleet dispatch.
- Developed vehicle compliance tracking, service maintenance scheduling, and document handling modules.
- Integrated RESTful APIs end-to-end from ASP.NET controllers to React UI for seamless data flow.
- Implemented secure JWT Authentication and role-based authorization for controlled access across multiple user roles.

Impact & Achievements:

- Improved operational efficiency by ~30% through optimized trip planning & automated lifecycle management.
- Enabled scalable multi-organization support with secure role-based architecture across ASP.NET & React layers.

Driver App

Role: Mobile App Developer (Flutter – Android)

Tech Stack: Flutter, Android, Firebase Cloud Messaging (FCM), Google Maps API, RESTful APIs, JWT Authentication

Overview:

Developed a driver-side mobile application integrated with a Fleet Management System for trip management, real-time tracking, navigation, and driver operations.

Key Contributions:

- Implemented secure authentication using OTP verification and JWT-based authorization.
- Designed trip management workflows for upcoming, live, and completed trips with real-time tracking.
- Leveraged Google Maps API for route visualization, navigation, and nearby search functionalities.
- Enabled real-time communication via SOS alerts and Firebase Cloud Messaging (FCM) for notifications.
- Delivered Proof of Delivery (POD) and issue reporting features with image upload, signature capture, voice-to-text, and location detection.

Impact & Achievements:

- Improved project visibility and tracking across teams.
- Reduced manual project management efforts through workflow automation.

Automotive Diagnostics Platform Website

Role: Full Stack Developer

Tech Stack: Next.js, React.js, JavaScript, Tailwind CSS, Node.js, REST APIs, SQL

Overview:

Built a high-performance automotive diagnostics platform focused on scalability, responsiveness, and seamless user experience across both frontend and backend systems.

Key Contributions:

- Built reusable UI components & responsive layouts, reducing development effort by 25% with better UI.
- Integrated RESTful APIs and managed real-time data flow for automotive diagnostics and monitoring features.
- Implemented secure forms with validation and CAPTCHA for reliable data management.
- Optimized frontend performance through efficient rendering and reusable components.

Impact & Achievements:

- Improved application performance and reduced load time through optimized rendering and code structuring.
- Enhanced data reliability and user experience with secure forms and responsive design.

Education

Bachelor of Engineering (B.E.), *Sinhgad College of Engineering*

CGPA: 8.48 / 10 (76.52%)

08/2019 – 06/2023

Vadgaon, Pune

Higher Secondary Certificate (HSC), *Hutatma Rajguru Mahavidyalaya*

Percentage: 72.15%

06/2018 – 03/2019

Rajgurunagar, Pune

Secondary School Certificate (SSC), *Nutan Vidyalaya Retwadi*

Percentage: 80.00%

06/2016 – 03/2017

Retwadi, Pune
